

## Atoll Energy part of French State visit to the Philippines against global warming

**Atoll Energy President Elena Barbizet will be taking part in Mr Hollande's State visit** to the Philippines from 26 to 28 February, in view of the upcoming conference "Paris Climat 2015" that the city will host from 2 to 9 December 2015.

Mr Hollande will be accompanied by several ministers, scholars and public figures working for the environment, as well as **corporate members whose businesses contribute to the drive for change towards a low carbon emission economic model.**

The 2010 startup company is a creator of innovative cogeneration solutions for off-the-grid clients. Atoll Energy integrates energy generation, energy efficiency and energy control into their patented technologies, therefore contributing to a significant reduction in energy consumption and the ensuring environmental impact. The Energy firm, has been certified twice as a non-carbon sector company by Capenergies cluster. In October 2014, they showcased their solutions at the CEA Cadarache Energy Research Centre.

**Atoll Energy is delighted to be part of the French State visit to the Philippines (an island nation with purposely tailored energy solutions) as part of its commitment to diversifying the global energy mix with the aim of opting for cost-efficient and eco-friendly energy solutions.**

The Philippines are comprised of 7100 islands in the West Pacific. Managing the energy supply is challenging. Moreover, they depend on more than 65% on fossil fuels to meet their energy demand, which is vital to their fast economic growth. Its tropical location makes it especially prone to environmental changes, typhoons and sea level rises. They need decentralised and resilient energy solutions.

**In light of the upcoming State visit, Mr Hollande and his Philippine counterpart Benigno Aquino will launch the Manila Declaration for the Climate. A founding text calling on the global community to act in view of the Paris conference,** where they will sign a historical agreement, aimed at limiting climate change to less than two degrees by the end of the century.
